

治験推進のためのインフラストラクチャー整備
—Concurrent Phase I Study in Japan and Globally—**

星 田 昌 宏*

Masahiro HOSHIDA*

Summary

Wyeth is currently conducting simultaneous development from the early clinical stage, Phase I, with the objective of providing innovative new drugs to patients worldwide as fast as possible. As a result of starting Phase I studies simultaneously, it is possible to join global Phase II or Phase III studies. Wyeth started 10 Phase I studies in 2006, of which most are part of simultaneous global developments. In this article, the process through which Wyeth starts Phase I studies in Japan is described.

Key words

Simultaneous development, Global development, Phase I study, Process
